

Kingdom Organics - Funder / LEADER + LEO

Rural grocery logistics. Tralee pilot. Evidence-backed.

What we ask

LEADER Analysis and Development: up to 90 pct aid, EUR 30,000 cap, to fund the 3-store Tralee validation and the local demand study (match ~EUR 3,000). Kerry LEO Feasibility Grant: 50 pct up to EUR 15,000, no match required.

The market

7 Kerry towns, 54,279 people. Two hubs Tralee 26,079 + Killarney 14,500 = 74.7 pct of addressable demand. Independents are bleeding online sales to 25-35 pct big delivery apps.

The model, true

15/20/28 pct commission plus ONE EUR 3.99 customer fee (Delivery 2.50 + Service 1.49). A Zone A grocery drop nets the platform EUR 3.94 and pays the driver EUR 7 to clear their fuel.

Why it survives without the grant

Asset-light, zero-fleet Stage A, own-car couriers. The 4-week Tralee pilot IS the feasibility evidence sprint. At standard rates it self-funds at ~10 drops a day; the 50% off pilot outlay (about EUR 350-550) is the study cost the grant covers. The grant buys SPEED and evidence to go 3-to-22 - a project that cannot die if you say no.

The tech exists

FastAPI 98 routes, React PWA, 3 role pathways, AI inventory onboarding, open-source dispatch, EUR 0 vendor fees. Multi-tenant refactor is Phase 2.

Later green capital (not this stage)

SEAI commercial EV EUR 3,800, VRT relief up to EUR 5,000 before 31 Dec 2026, ZEV charging EUR 5,000 per charger. Fleet = Phase 3.

Roadmap

Phase 1 Tralee 3 stores. Phase 2 multi-tenant + Killarney Stage B. Phase 3 EV vans + e-bikes + depot solar + farm-to-door. Phase 4 22 stores.

Public value

Keeps spend local, backs Kerry producers and Kerry's own producers, low-emission last mile, rural jobs on a guaranteed pay floor.

Honest caveats on file

Min-wage citation, real van lease and insurance quotes, BYD service network, and the restaurant commission structure are all flagged as open, not hidden.

The close

Fund the study. We bring the evidence and 3 live Tralee stores in 4 weeks.
