

Kingdom Organics - Master Plan V2

Distance-based grocery and takeaway delivery, Tralee pilot. 2026.

1. One commission, never changes

A single 3-zone model applies to BOTH groceries and fast food:

Zone		Store commission
------	--	------------------

A up to 5 km		15 pct
--------------	--	--------

B 5-12 km		20 pct
-----------	--	--------

C 12 km+		28 pct
----------	--	--------

The rate rises with distance, so a long run gives the store AND the driver more cash. The commission never moves, no pilot discount on the commission.

2. Customer fee, shown upfront

The customer pays ONE total of EUR 3.99, itemised at the basket:

- Delivery EUR 2.50
- Service fee EUR 1.49

Both lines visible before checkout. No stacking, no surprise at payment.

3. Unit economics (Zone A)

Net per drop = commission + 3.99 fee - driver pay - 0.55 card

- GROCERY: 50 basket, 7.50 comm + 3.99 - 7.00 driver - 0.55 = NET 3.94

- FAST FOOD: 40 basket, 6.00 comm + 3.99 - 5.50 driver - 0.55 = NET 3.94

Both markets net 3.94 per drop. Same margin, different volume: takeaway turns over more drops a day.

4. Driver pay and the floor

Zone-scaled driver bands, plus keep 100 pct of tips:

- Grocery 7.00 / 9.50 / 14.00 (heavy, cold, 8-12 km rounds)
- Takeaway 5.50 / 7.50 / 11.00 (light bags, 6 km, high frequency)

The floor is a BOOKING rule, not a wage we pay from our own pocket: we open a driver window only when enough orders are already booked to clear the minimum. Thin day = we do not open it. Nobody is paid for an empty shift.

5. Packages (for stores only)

We sell CAPABILITY, not a cheap tool. A small shop gets the multimodal inventory scan, live tracking and delivery that Wix or Shopify do not have - supermarket-grade online sales plus doorstep delivery.

- Growth and Enterprise packages
- The 50 pct off applies to the PACKAGE for pilot stores, NOT the commission
- Price stays unlisted until we get a real quote

6. The pilot: 3 grocery + 3 fast food, Tralee

4-6 weeks, Stage A only, asset-light, ZERO capital. No vans or e-bikes in the pilot (couriers use their own cars); fleet is Phase 3, grant-funded. Stores sign up FIRST, then the customer marketing runs.

7. The money

Per store per month, mature Tralee:

- 1 grocery store at 6 drops/day = EUR 709/mo net

- 1 takeaway at 10 drops/day = EUR 1,182/mo net

3+3 mature (about 48 drops/day): EUR 189/day = EUR 5,674/MONTH net. Minus about EUR 500 marketing = about EUR 5,174/month.

8. Marketing-gated 4-week ramp

- W1 about 21 drops/day = EUR 579/week (cold-start dip)
- W4 about 66 drops/day = EUR 1,820/week
- 4-week net about EUR 4,800, less about EUR 500 est marketing = about EUR 4,300

Store count is NOT the lever. Demand comes from marketing, not from signing more till screens.

9. Drivers

Grocery about 8 heavy drops a 3-hour window, takeaway about 12 light drops.

- W1: 2-3 part-timers
- W4 peak: about 3-4 part-timers

No standing payroll, shifts open only when booked.

10. Funding (verified external facts only)

LEADER Analysis and Development up to 90 pct, 30,000 cap. Kerry LEO Feasibility 50 pct up to 15,000, no match. Run in parallel. The pilot itself self-funds; the grant buys SPEED and the 3-to-22 research.

11. VAT

Under the EUR 37,500 services threshold there is no VAT, a real edge on price. Model the cliff; crossing it cuts net about 30 pct. Time the registration.

12. Honesty flags

Illustrative baskets (50 grocery, 40 takeaway). Minimum wage 13.50/hr not re-sourced. Marketing EUR 500 is an estimate. Fleet lease and van insurance are estimates pending quotes. Confirm before print.
